

## Create Web Wireframe (PROJECT) (10)

create a normal wireframe ( 5 Mark )

:- [wireframe Link](#)

[Frame.png](#)

A wireframe using the <table> tag in HTML outlines a structured grid layout with rows and columns, providing a systematic arrangement for content organization. ( 5 Mark )

create a normal 5 Mark ) wireframe with Content (

wireframe content Link

1. Create a Wireframe Above and Set your content in your wireframe
2. Show (wireframe content Link) this image in set content

**Note** – add font-style ( color, face , size );

1. add background color and some colors apply in some content button and icon
2. Maintain consistency in wireframes by using either filled icons throughout or stock icons consistently. Avoid mixing filled and stock icons within the same wireframe
3. Arrange the image neatly in the wireframe by including all details within the <img> tag: URL (src), description (alt), width, and height. Adjust attributes as needed for a perfect fit.
  4. Organise your code structure by using table ( [Table Group](#) ) tags and form ( [Form Group](#) ) tags, grouping related elements together for clarity and organisation.
5. You'll see icons for different social media platforms.
  - Clicking on any of them will take you to the respective social media pages in a new tab.
